GENERAL RECOMMENDATIONS

- Never mix together in the same tank any fungicide with Myconnect™. It is strongly recommended to apply it separately.
 - Drench fungicide applications should be done 2 weeks prior or 2 weeks after MyConnect™ inoculation. The longer the wait to apply any fungicide after sowing, the better MyConnect™ will perform.
 - Foliar sprays of fungicide (except systemics ones) have little or no effect on MyConnect™ performance.
 - If you have any doubt or questions about fungicide, insecticide or herbicide compatibility with MyConnect™ contact us through www.risehop.com/info and we will answer you shortly.
- * Variable compatibility means that the succes may depends on the application method or concentration. Contact us to inquire about the specificity o to have access to litterature references.
